ILLUMINE ASSOCIATION

My name is Emiola Oluwaseun S. known as Roth **S'qubit**, **president** of **Illumine music association**, Illumine music association is the first government approved music association in town and is located in **ago iwoye, ogun state, Nigeria**.

I am not really a student of **science**. I am an experiencer of consciousness. And consciousness is the feeling of **energy**. All energy has a feeling. Our mind sees and holds the patterns of energy and in this way can create. See a drum it is energy and **patterns** of **light**. But the mind creates a drum, and can understand about the drum, tree or star or whatever it thinks about or feels. Mind is the **creator** of patterns.

Sound is a form of wave on the electro magnetic EM spectrum capable of traveling beyond the physical matter and illustrating frequencies through different variables for mass enlightenment.

I am here to introduce my new discovery which gives me the capacity to illuminate dark thoughtforms without entanglement, it is metaphysical element which ignite the nucleus law that resonates with different frequencies in the physical universe and parallel dimensions through the formation of alphabetical algorithms for creating spectrum to decipher energy. This creates the logic qubit for clairvoyant access to dark matters/paranormal phenomenon beyond our mechanistic 3D assumptive dimension using sound energy, the blueprint illustrate geometry information for conscious awareness of our higher selves and alignment with the universe

assumed to be completely mechanistic ; creating the binary of our Sun's capacity through acoustic (our Sun's binary equivalent in terms of function) which will endow us with the capacity to make an unlimited source of power - mechanistically emanated energy and result in spiritual elevation through demonstration of uncommon capacity and eliminating scarcity.
This formation is an organic method for engagements in complex interdependencies for mutual benefit (such as business agreements), rather than mechanical solidarity, which depends on ascribed relations between people (as in a family or tribe).

Music is the sequence of sounds, patterns, code, cymatics etc, to formulate mathematical algorithms for generating harmony. This spectrum enables me to sequence the conscious state for Trinity incarnation of the Hebrew/ Arabic angel of death using music frequency to mutate death has an entity of light/life on our 3d reality as an ample evidence of extraterrestrial entities, which I can also create numinous words/ sentences with reverse meanings through phonetics vibe to illustrate our universe octaves and parallel dimensions using multiple languages simultaneously.

https://en.m.wikipedia.org/wiki/Azrael

ALPHA BIT (369)

Alpha bit (alpha 369) discovery is the hypothesis for alphabetical dimension to mathematical expression through sound wave. is a geometry code, signs and symbols, language etc to analyze information in a unique dimension that analyzes and solves problems in the systematic order without delusion in communication, this is a new form of qubit capable of illuminating dark thoughts and parallel phenomenon by constructing alphabets through a spectaculous dimension for diction, the fact that there's no delusion in my 5th-dimension and beyond enables my autodidactic information to align with other systematic programs.

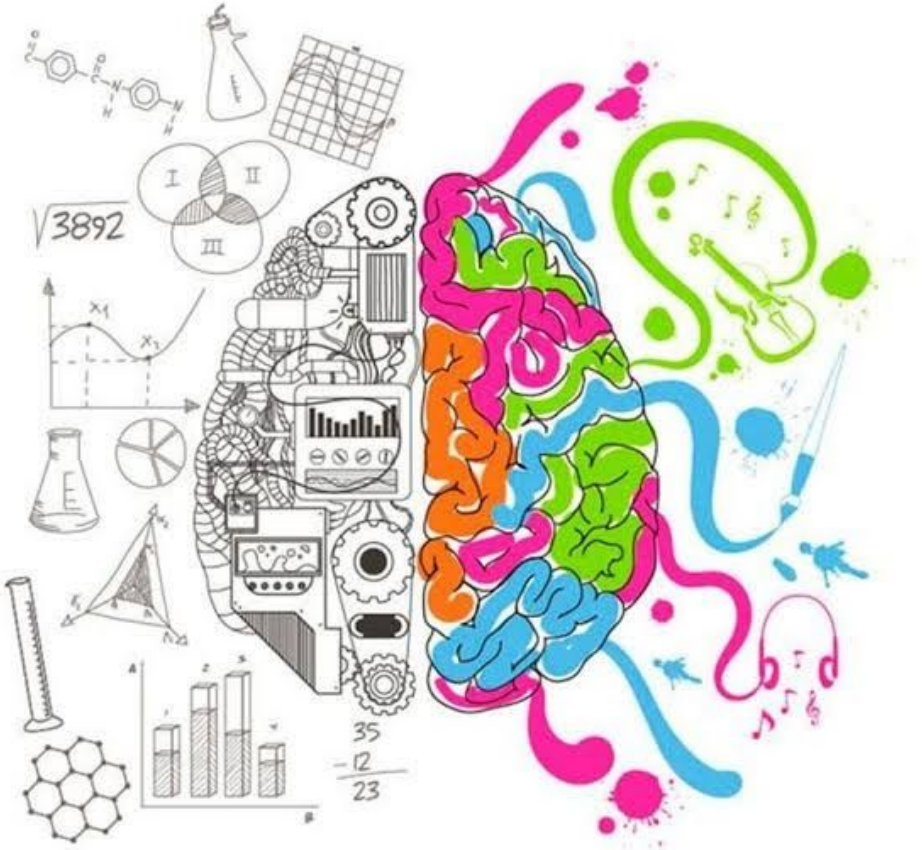
Opening the portal between our universe and the multiverse will enhance the expansion of the quantum energy for the cosmos without chaos.

The Effect of Music on Social Psychology

Social Psychology is a scientific study of human behavior in society. It studies human behavior in groups and how human behavior is influenced by others. It attempts to understand the socio-psychological causes and motives of human behavior in groups.

Music stimulates emotion through brain circuits. Music has a central role in human society because it so strongly evokes feelings and affects social activities and interactions. The study of music's influence has greatly increased knowledge of emotion in the brain.

HUMAN BRAIN

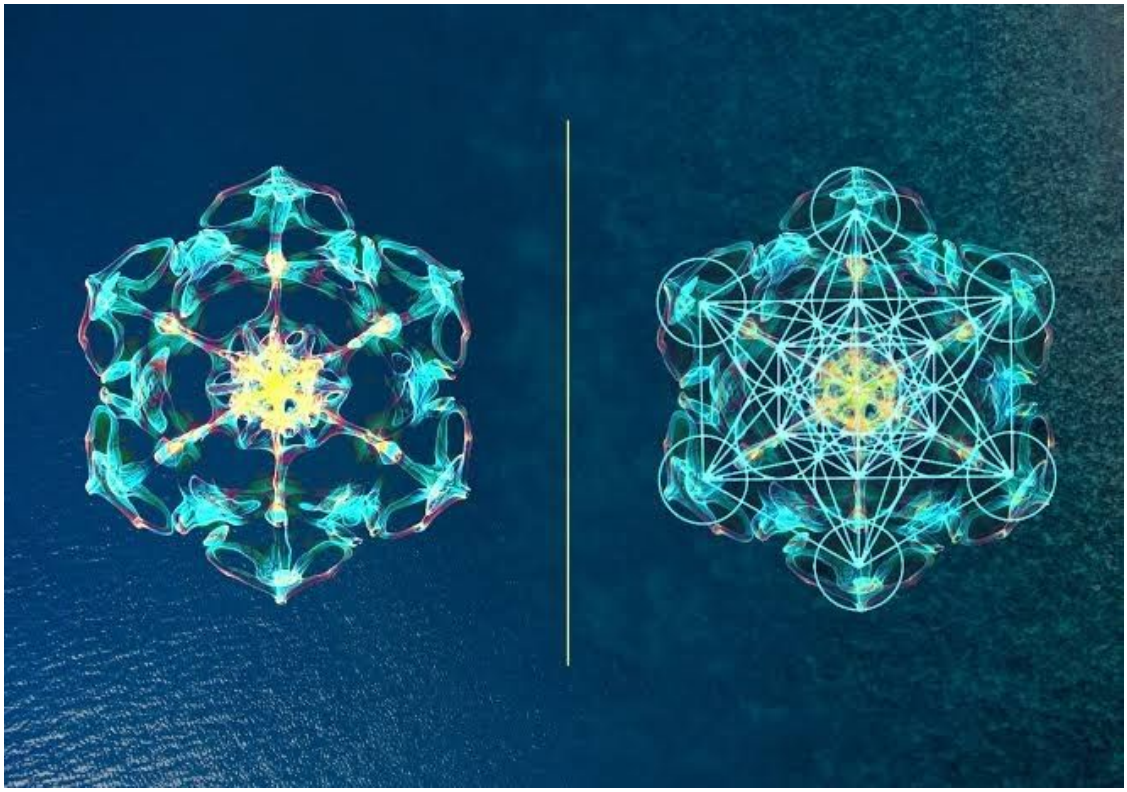


The **human brain** generates sacred information from the parallel universe which is also simulated to the fabric the computer is also arranged/ built, my energy theory can solve problems as fast as a quantum computer on a universal dimension compared to ordinary

perspective.

The qubit formation sparkles the radiation and interaction between the two brain hemispheres which is called, the corpus callosum that contains a bundle of neural fibers found in human and mammals with higher faculties that allow the two hemispheres to talk to one another, which gives me the tendency to use the both sides in singularity without the medial longitudinal fissure by vertebrate cerebrum.
I have generated the key element to access the core of the logical mechanism capable of unifying matter on a quantum scale.

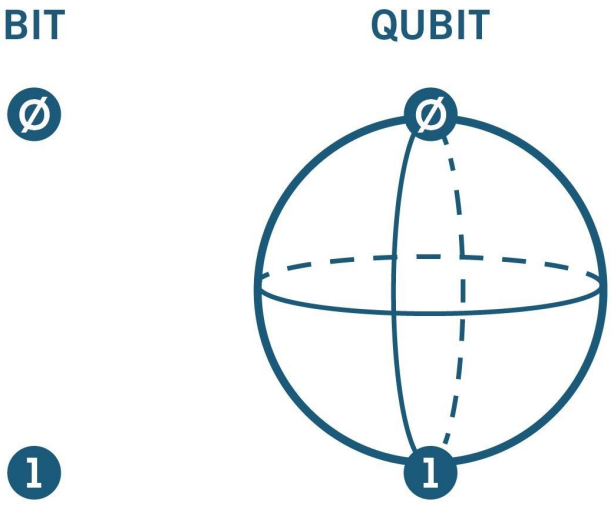
The point of this **project** is to open as many minds as possible so the maximum number of embodied souls can escape the current **3D** problems.
My research on the exploration of dark matter/paranormal phenomenon through metaphysics is to create structures needed for quantum energy equations.



COMPUTER

A computer is a machine that can be instructed to carry out sequences of arithmetic or logical operations automatically via computer programming. Modern computers have the ability to follow generalized sets of operations, called programs. These programs enable computers to

perform an extremely wide range of tasks. A "complete" computer including the hardware, the operating system (main software), and peripheral equipment required and used for "full" operation can be referred to as a computer system. This term may as well be used for a group of computers that are connected and work together, in particular a computer network or computer cluster.



BIT

The bit is a basic unit of information, information theory, computing, music and communication . The name is a portmanteau of binary digits.
Binary digit , characterized as 0 or 1 , but other representations such as
true /false, yes/ no , + / − , or on / off are common.

The correspondence between these values and the physical states of the underlying storage or device is a matter of convention, Is used to represent information in classical computers.

QUBIT

Qubit means quantum bit, works with phi sequence which is simultaneously so to get the best information to matters which are sacred geometry code for the system in general, it affects the quantum mechanical properties such as superposition and entanglement, which lead to the generation of *the quantum computer*.

A **physical qubit** is a physical device that behaves as a two-state quantum system, used as a component of a computer system.

A **logical qubit** is a physical or abstract qubit that performs as specified in a quantum algorithm or quantum circuit, subject to unitary transformation.

There are two possible outcomes for the measurement of a qubit—usually taken to have the value "0" and "1",true /false, yes/ no , + / − , like a bit or binary digit. However, whereas the state of a bit can only be either 0 or 1, the general state of a qubit according to quantum mechanics can be a coherent superposition of both.

- a higher **vibrational** consciousness of quantum **energy**, enabling us to generate enough **power** disconnecting us from division and suffering among humanity - all without entanglement. The alpha 369 code to enhance the equation that generates a 5d program to align with our cerebrum for adequate conscious understanding of physical and non physical phenomena.

QUANTUM

The word quantum indicates the living consciousness and interaction between us and all things. In physics, a quantum (plural quanta) is the minimum amount of any physical entity (physical property) involved in an interaction. The fundamental notion that a physical property can be "quantized" is referred to as "the hypothesis of quantization".

Our universe is a sacred multi-dimensional algorithm which we can quantize through a manifestation-ally of the energy formula to ignite interaction between physics and metaphysics; consciousness and it's proxy counterpart machine agent - automation.

BRAIN MACHINE INTERFACES (IBM)

Brain-machine interfaces (BMIs) have the potential to help people with a wide range of clinical disorders. For example, researchers have demonstrated human neuroprosthetic control of computer cursors, robotic limbs, and speech synthesizers using no more than 256 electrodes. While these successes suggest that high fidelity information transfer between brains and machines is possible, development of BMI has been critically limited by the inability to record from large numbers of neurons. Noninvasive approaches can record the average of millions of neurons through the skull, but this signal is distorted and nonspecific. Invasive electrodes placed on the surface of the cortex can record useful signals, but they are limited in that they average the activity of thousands of neurons and cannot record signals deep in the brain. Most BMI's have used invasive techniques because the most precise readout of neural representations requires recording single action potentials from neurons in distributed, functionally-linked ensembles.

Microelectrodes are the gold-standard technology for recording action potentials, but there has not been a clinically-translatable microelectrode technology for large-scale recordings. This would require a system with material properties that provide high biocompatibility, safety, and

longevity. Moreover, this device would also need a practical surgical approach and high-density, low-power electronics to ultimately facilitate fully-implanted wireless operation.

Most devices for long-term neural recording are arrays of electrodes made from rigid metals or semiconductors. While rigid metal arrays facilitate penetrating the brain, the size, Young's modulus and bending stiffness mismatches between stiff probes and brain tissue can drive immune responses that limit the function and longevity of these devices. Furthermore, the fixed geometry of these arrays constrains the populations of neurons that can be accessed, especially due to the presence of vasculature.

An alternative approach is to use thin, flexible multi-electrode polymer probes. The smaller size and increased flexibility of these probes should offer greater biocompatibility. However, a drawback of this approach is that thin polymer probes are not stiff enough to directly insert into the brain; their insertion must be facilitated by stiffeners, injection or other approaches, all of which are quite slow. To satisfy the functional requirements for a high-bandwidth BMI, while taking advantage of the properties of thin-film devices, we developed a robotic approach, where large numbers of fine and flexible polymer probes are efficiently and independently inserted across multiple brain regions].

Developing ultra high bandwidth interfaces to connect the brain and computer through spirituality.

QUANTUM FIELD

Quantum field is inherently relativistic, and "magically" (not really, just elegant math) resolves issues of causality that plague even relativistic quantum particle theories, quantum fields not interacting with matter. Quantum fields are matter. In a quantum field theory, what we perceive as particles are excitations of the quantum field itself.
The "practical" quantum field theory is biochemical and technical. In it, two fields exist: These two fields continuously interact with each other, energy and momentum are transferred, and excitations are created or destroyed, a specific interaction between two fields.

QUANTUM TECHNOLOGY

Quantum technology is an emerging field of physics and engineering, which relies on the principles of quantum physics. It is about creating practical applications—such as quantum computing, quantum sensors, quantum cryptography, quantum simulation, quantum metrology and quantum imaging—based on properties of quantum mechanics, especially quantum entanglement, quantum superposition and quantum tunnelling.

5G TECHNOLOGY

5G is the 5th generation mobile network. It is a new global wireless standard after 1G, 2G, 3G, and 4G networks. 5G enables a new kind of network that is designed to connect virtually everyone and everything together including machines, objects, and devices. 5G wireless technology is meant to deliver higher multi-Gbps peak data speeds, ultra low latency, more reliability, massive network capacity, increased availability, and a more uniform user experience to more users. Higher performance and improved efficiency empower new user experiences and connects new industries.

QUANTUM BIOCHEMISTRY

Quantum biochemistry applies the general ideas and methods of wave mechanics to the study of the electronic structure of biological molecules in relation to their behavior as substrates of life and to their involvement in the biochemical and biophysical processes characteristic of living matter. An advantage of the quantum-mechanical approach to biochemistry and biophysics resides in the possibility that it offers to precede experimentation in a number of fields in which the experimentation seems to be particularly difficult to carry out. Thus, the calculations frequently permit determining the values—more or less exact values, according to the degree of refinement of the calculations—of a series of physicochemical characteristics of molecular systems that seem to be at present beyond the possibilities of experimental determination, or that are at least very difficult to measure presently. Quantum theory presents two fundamental methods for the study of the electronic structure of molecules—the valence-bond method, whose simplified qualitative version is frequently referred to as the resonance theory, and the molecular-orbital method.

Biochemical analysis techniques refers to a set of methods, assays, and procedures that enable scientists to analyze the substances found in living organisms and the chemical reactions underlying life processes. The most sophisticated of these techniques are reserved for specialty research and diagnostic laboratories, although simplified sets of these techniques are used in such common events as testing for illegal drug abuse in competitive athletic events and monitoring of blood sugar by diabetic patients.

Biochemistry techniques are Protein Purification, perfusion, Homogenization, Differential Centrifugation, Purification of LDH, Purification of LDH , LDH Enzyme assays, Protein assays, Characterization of LDH, Western blotting, Gel filtration chromatography, Protein crystallography, PCR, Ligation and transformation, Selection and screening and Enzyme Kinetics.

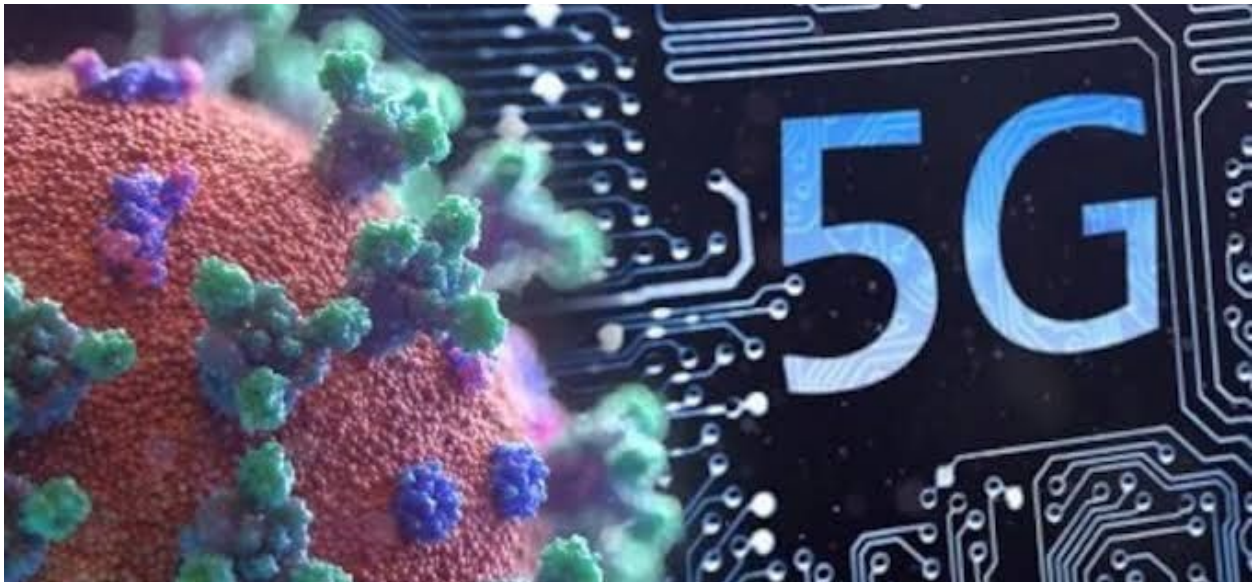
What 5G means for our health

5G mobile technology promises a ten-fold increase in data transmission rates compared to current 4G networks, which will achieve a higher transmission frequency to power the microfluidic or microchip device for adequate solution to health purposes. The physiological effects of electromagnetic radiation change with frequency, so the advent of 5G triggered a major international review of relevant radiation safety guidelines. researchers are racing to ensure that the technology’s impact on our bodies is understood.

The main biological effect of the electromagnetic radiation from mobile phones is a rise in temperature,”



This focuses on **biochemical** and **5G** technology analysis systems using pressure-driven microfluidic devices or microchips. Liquid microspace in a microchip has several characteristic features, for example, short diffusion distances, high specific interfacial area and small heat capacity. These characteristics are the key to controlling micro unit operations and constructing new integrated chemical systems. By combining multiphase laminar flow and the micro unit operations, such as mixing, reaction, extraction and separation, continuous flow chemical processing systems are realized in the microchip format. By applying these concepts, several different analysis systems were successfully integrated on a microchip.

This is the golden ratio of the nucleus formula for illustrating universal truth in language mass can relate and create the force to bring people quickly to realization of their blueprints consciousness for resolving problems through quantum fields experiment.

The nucleus **formula** creates a unitary state and sufficient power among humanity due to conscious enlightenment of our energy source through **keylontic science**.

CERN

CERN's mission is: To provide a unique range of particle accelerator facilities that enable research at the forefront of human knowledge. To perform world-class research in fundamental physics. To unite people from all over the world to push the frontiers of science and technology, for the benefit of all.

ATLAS (A Toroidal LHC ApparatuS) is one of the four major experiments at the Large Hadron Collider (LHC) at CERN. It is a general-purpose particle physics experiment run by an international collaboration and, together with CMS, is designed to exploit the full discovery potential and the vast range of physics opportunities that the LHC provides.
ATLAS's scientific exploration uses precision measurement to push the frontiers of knowledge by seeking answers to fundamental questions such as: What are the basic building blocks of matter? What are the fundamental forces of nature? Could there be a greater underlying symmetry to our universe?

ATLAS physicists test the predictions of the Standard Model, which encapsulates our current understanding of what the building blocks of matter are and how they interact. These studies can lead to ground-breaking discoveries, such as that of the Higgs boson, physics beyond the Standard Model and the development of new theories to better describe our universe.

ILLUMINE

Illumine mission is to create a unique range of energy through metaphysics,
Using **sound** as a form of energy to travelling beyond the physical **matter** and illustrating **frequencies** through different variables for mass enlightenment which is entangled with CERN physics discoveries because we experiment through different theories and also in superposition due to the same motives for understanding the universe spiritually and scientifically.
Our experiment will develop a high energy structure without chaos.

We are **conduits**, an intermediary of energy. I am here as an anchor of light. Holding the frequency higher.

In association with

James Missal

As **president** of the Showland LLC, Showland llc is a new genre of entertainment that combines Live Theatre & Movie Cinema in
Niagara falls New York, USA.

In 2017 i received an invitation from James Missal president of the Showland LLC for an experiment on Geo acoustic and hurricane frequency in **Nikola Tesla museum** in New York Niagara falls USA. However, due to economic limitations I was unable to make it that year... The accomplishment of the quantum experiment with ANTEKK and Showland llc will give us a conscious understanding of matter and finding solutions to complex problems by projecting energy as a positive entity.

Terry Peters Cawley

Founder of **Ms "T" production**, Ms "T" production is set up to produce a number of television shows and movies. One is a TV Sitcom, "For The Birds" she created inspired by her current hometown Brookfield, Illinois but actually filmed and taking place in Groveland, California.

Terry has had a long and extensive career in International Business beginning in 1982. This is her first time entering this arena. The productions are actually part of her lengthy study and remastering of The Global Economy, based on her experience in Applied Macroeconomics, along with others of similar backgrounds.

Her collegiate background to date is:

Baldwin - Wallace College: Bachelor of Science- Majors: Math/Psychology/Education. Minor Science

Additional Concentration Social Psychology 1978-1982

Illinois Institute of Technology: Master of Science- Operations and Technology Management 1998-2000.

Philip Bogolub

Phillip Bogolub is the owner and creator of Bogolub Records. His company's objective is focused on creating music for movie trailers, movie soundtracks, commercials, podcasts, business presentations, corporate events or whatever you are looking for with your project. Phil has a generous catalog of music to fit into any genre. He composes, writes, produces, and plays all his own original material. Phil goes back to the basics of customer service. From the beginning you will talk on the phone or meet for a cup of coffee since there is no endless texting or emailing from his business. Phil believes collaboration is the key to success. Since you put your heart and soul into your project wouldn't you only want the best composition designed to create the emotion you want to convey, to give your story the added voice it needs to grab the world's attention!

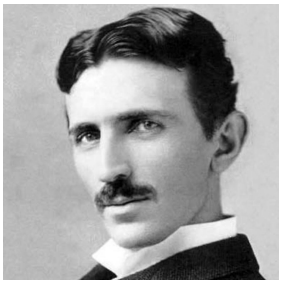
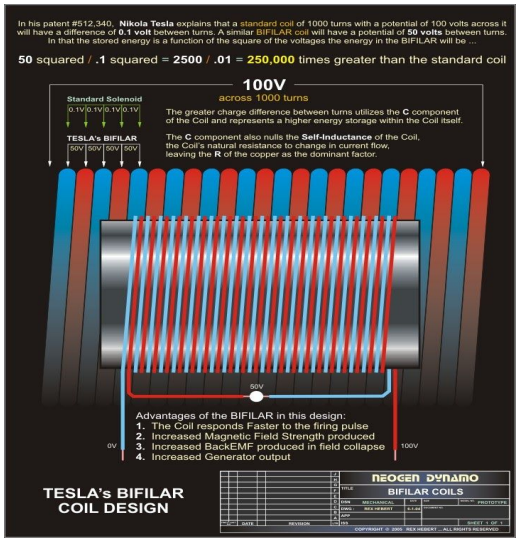
We are the light



Nikola Tesla - Quotes
Inventor of Alternating Current



In his patent #512,340, Nikola Tesla explains that a standard coil of 1000 turns with a potential of 100 volts across it will have a difference of 0.1 volt between turns. A similar BIFILAR coil will have a potential of 50 volts between turns. In that the stored energy is a function of the square of the voltages the energy in the BIFILAR will be ...
50 squared / .1 squared = 2500 / .01 = 250,000 times greater than the standard coil
100V
across 1000 turns
Standard Solenoid
0.1V 0.1V 0.1V 0.1V
TESLA's BIFILAR
50V 50V 50V 50V
The greater charge difference between turns utilizes the C component of the Coil and represents a higher energy storage within the Coil itself.
The C component also nulls the Self-Inductance of the Coil, the Coil's natural resistance to change in current flow, leaving the R of the copper as the dominant factor.
50V
0V
100V
Advantages of the BIFILAR in this design:
1. The Coil responds Faster to the firing pulse
2. Increased Magnetic Field Strength produced
3. Increased BackEMF produced in field collapse
4. Increased Generator output
TESLA's BIFILAR COIL DESIGN
NEOGEN DYNAMO
BIFILAR COILS

"The day science begins to study non-physical phenomena, it will make more progress in one decade than in all the previous centuries of its existence"

Mission Statement

To harmonically elucidate and bring life to keylontic and nascent science that will restore peace, prosperity, and environmental stewardship.

[Note to collaborators: Public Version 4 transparency is available here]

"My brain is only a receiver, in the Universe there is a core from which we obtain knowledge, strength and inspiration. I have not penetrated into the secrets of this core, but I know that it exists."
— Nikola Tesla
